Government plans 15% subsidy on E-Rickshaw price soon

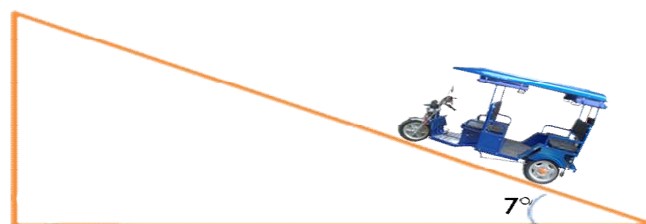

The Delhi government's environment and transport departments will be moving a cabinet note soon to offer a 15% subsidy on the price of e-rickshaws and other battery-operated vehicles.

The subsidy was announced by transport minister Gopal Rai last month at a Janta cabinet. The subsidy would be given at the time of registration, he had said. "The note specifies a 15% subsidy for buying new e-rickshaws. If approved by the cabinet, the scheme will be launched immediately," an official said.

The government had given time till June for registration to those drivers who have already bought e-rickshaws. However, these vehicles could get registered only after a nod from a government approved agency for type testing.

The issue was that none of the e-rickshaw bought earlier have type approval, forcing the drivers to look for certification from an e-rickshaw association. At present, there is only one e-rickshaw association, Battery Rickshaw Sangh.

We Proudly say that an E-Rickshaw powered by Compage BLDC motor has passed gradient test at ICAT under CMVR applicable for E-Rickshaws.

"The sound of the future is silence"

Noida, Ghaziabad start E-rickshaw registration

The transport authority on Thursday (4th June 2015) started the registration of e-rickshaws in Noida and Ghaziabad for the first time. The target is to complete it within six months.

"The registration of all e-rickshaws has now been made mandatory. The drivers shall have a valid driving license and the vehicles will have a permit to ply in the city," said Ghaziabad RTO Mayank Jyoti. The move has been welcomed by the e-rickshaw drivers. "There are hundreds of e-rickshaws which ply in Noida and Ghaziabad. Regularization of this vehicle will be a great help for us. We will be able to work without fear as it is related to our livelihood," said Mukesh Kumar, who ferries passengers from Sector 37 to Sector 15 in Noida.

The move comes after the Delhi government recently launched a drive to get e-rickshaws registered and issue learner's license to drivers.

BHAV-PAC

BHAV-PAC is an organized body of Cluster manufacturers who are in manufacturing of

- E-Rickshaws / Battery Vehicles
- Power train items namely battery, Controller, BLDC Motors and differential.
- Accessories for Battery vehicles.
- Hybrid fitment for automobiles.

The Cluster will focus for many joint efforts of battery vehicle manufacturers.
